

# Bespoke Stables

Although we offer standard stable sizes, we understand that your land and your horse's needs may not always be standard. Perhaps planning permission dictates that your building is to be a certain size, or you need office space adjoined to the stables; we can provide a package that suits you.

## The Process

### Site visit

To begin with, it is best for us to visit your property and understand the site. This is to get an overall idea of the position, size and orientation of the building, but most importantly to meet you. We can advise on which of our buildings will work for you and talk through what you will need.

### Planning Drawings

Once the size and number of stables have been agreed upon, we will provide a drawing to show the configuration of the stable block. This will enable you to see the layout, but more importantly, if there is a particular element on the design that needs to be changed, it can be altered. This could be window placement, door placement or movement of a partition wall. From this, we can then provide the necessary plans to send to your groundworker, so they can construct the base.

### Manufacture

Once the base has been checked we begin the manufacture of the building. This happens at our workshop in Horam, East Sussex. Our experienced team can create the building to a high standard, with fantastic finishing touches, such as gallows brackets, chamfered posts and heavy-duty doors.

### Installation

The install date is confirmed with the customer, and the manufactured building is delivered along with one of our install teams. The wall panels are erected first, followed by the roof. The length of time this takes is purely dependant on the size and nature of the building. Kickboards are installed, followed by doors and guttering.
