

Rubber Matting

Our grass mats are designed to protect the ground and grass from becoming churned up with mud. Our grass mats are 17mm in depth and 1.2m wide by 1.8m in length.

Stable mats are designed to keep the horse's area clean, making stables and shelters easy to sweep and hose down.

There is also the option to place stable mats on top of your grass mats if your building is sitting on a field or a particularly muddy area. Our stable mats are 23mm in depth and 1m wide by 1.5m in length.

Rubber Matting Key Benefits:

Perfect for stable, grazing areas & paddocks

Protects the grass

Durable

Excellent for drainage

Non-Slip

Easy to clean

Easy to fit

How it works

See below how many you would need to fit into your shelter/ stable.

Design

They are designed with ring holes (grass mats), which allows the grass to grow back through the mat, which in turn keeps your grass looking better.

Fitting

The mats are placed side by side, cut to size with a Stanley knife and connect with cable ties (Grass Mats only)
